

Joseph Rey C. Marilla

Remote IT Operations Specialist | MSP · IAM & Azure AD Expert · Automation

+63 917 591 5147 · cxcx255@gmail.com · cxcx25@yahoo.com

<https://cxcx25.github.io/MyProfile/> · [linkedin.com/in/josephreymarilla](https://www.linkedin.com/in/josephreymarilla)

Highly experienced IT and Telecommunications Engineer with a strong foundation in enterprise service desk, Managed Service Provider (MSP) operations, identity management, and application development. Currently specializing in Identity and Access Management (IAM), providing Level 2 support for Azure AD (Entra ID), Microsoft 365, SAP systems (via NetIQ Identity Manager), and the NetIQ IAM platform. Passionate about building practical tools and full-stack solutions, including a C# WPF-based Active Directory and Azure AD management application, a complete Barangay Super App MVP (Go + Flutter + React), and Python-based automation tools using PyQt, SQLite, and Selenium.

Designed and delivered a complete full-stack Barangay Super App MVP — a production-ready community platform connecting residents for transport services, buy/sell marketplace, messaging, and local services.

Developed cross-platform Flutter mobile application (MVVM + GetX) and React admin dashboard with secure role-based access control.

Implemented CI/CD pipelines (GitHub Actions), Verification-Driven Development (VDD), and full security scanning (SAST, SCA, secrets scanning, image scanning) following shift-left principles.

Deployed via Cloudflare Tunnel for live external access; currently 100% MVP integrated and operational.

Built high-performance Go backend (modular architecture, JWT authentication, RBAC, repository pattern) integrated with PostgreSQL and Docker orchestration.

Development: Python (PyQt, Selenium, automation) · C# / .NET / WPF · Go (JWT, RBAC, Repository Pattern) · Flutter & Dart (MVVM + GetX) · React

Data & Platform: Datto RMM · IT Glue · Cisco Meraki · Microsoft Intune · network printer/fax automation · PostgreSQL · Docker · Firebase · SQLite · Git

Engineering / GIS: ArcGIS & ArcFM (ESRI certified) · Telecom copper & fiber design · AutoCAD · MicroStation · Revit

KEY PROJECTS

C# WPF AD / Azure AD Management Tool — Reduced manual errors 95%

Automates complex Active Directory and Azure AD management tasks — streamlining user provisioning, group management, and access control while cutting manual errors and freeing IT staff time.

Stack: C#, .NET, WPF, Active Directory API, Microsoft Graph API

Barangay Super App MVP — 100% MVP complete

Full-stack community platform connecting residents for transport, a buy/sell marketplace, messaging, and local services. Modular Go backend (JWT, RBAC, Repository Pattern), cross-platform Flutter app (MVVM + GetX), and a React admin dashboard with role-based access. Full security scanning (SAST, SCA, secrets, Shift-Left) and modularized API architecture.

Stack: Go, Flutter, React, PostgreSQL, Docker, GitHub Actions, Cloudflare Tunnel

Python IT Productivity Suite — 500+ tickets/day · -30% AHT

Automates routine ticket management and integrates with knowledge bases for faster resolutions, processing over 500 ticket entries per day and reducing average handling time by 30%.

Stack: Python, Tkinter, API integrations (Jira, ServiceNow)

PROFESSIONAL EXPERIENCE

L2 IT Operations / MSP Analyst · ScalableOS

May 2026 – Present

- Delivered comprehensive L1/L2 support in a fast-paced MSP environment, troubleshooting hardware (printers, scanners, workstations) and configuring network infrastructure including Cisco Meraki firewalls, access points, and VPNs.
- Administered and secured enterprise Microsoft 365 and Azure environments, leveraging Entra ID, Conditional Access, Intune, and Duo for robust Multi-Factor Authentication (MFA) and unified endpoint management.
- Managed complete Identity and Access Management (IAM) lifecycles for user onboarding/offboarding, securely configuring permissions, distribution groups, and privileged access using Quickpass.

- Utilized RMM (Datto RMM, N-able) and PSA tools to proactively monitor systems, while meticulously maintaining client infrastructure records and knowledge base documentation within IT Glue.
- Acted as a primary technical escalation point for cloud platforms and device security (including Beachhead encryption), maintaining end-to-end ticket ownership to drive rapid issue resolution.

Service Desk Analyst L2 / IAM · WeSupport Incorporated

Feb 2024 – Feb 2026

- Provided Level 2 IAM support for Azure AD (Entra ID), Microsoft 365, and SAP systems (LUP, DWP, CRM, Fiori, etc.) using the NetIQ Identity Manager platform; performed user provisioning, role assignments, access extensions, password resets, and security-related requests in alignment with IAM and compliance standards.
- Supported IAM operations including account lifecycle management, access reviews, mailbox permissions, and distribution list administration.
- Developed and maintained standardized technical documentation and SOPs, improving consistency, reducing resolution time, and supporting knowledge transfer across service desk teams.
- Delivered day-to-day MSP support across multiple client tenants — endpoint monitoring, patching, and remediation via Datto RMM, with software deployment and application support through Microsoft Intune and manual installation.
- Maintained client documentation, runbooks, and password/asset records in IT Glue, keeping standardized SOPs current and improving technician onboarding and knowledge transfer.
- Supported and troubleshoot network infrastructure — Cisco Meraki switches, APs, and firewalls (VLANs, SSIDs, client visibility) — alongside network printer, scanner, and fax setup, driver deployment, and print-queue automation across client sites.
- Administered email and collaboration services — mailbox access, shared mailboxes, distribution lists, licensing, and PSA/ticketing integration.
- Drove automation by developing PowerShell and Python scripts to streamline repetitive service desk and IAM tasks, including Active Directory automation.
- Independently built internal tooling — a C# WPF AD/Azure AD management application and a Python desktop notepad, knowledge base, and ticket management app — to improve operational visibility and efficiency.

At-Home Service Desk · TTEC

Sep 2022 – Feb 2024

- Managed the end-to-end incident lifecycle and provided Tier 1 omnichannel support to diagnose and resolve complex hardware, software, and network incidents, ensuring strict adherence to SLAs and high First Call Resolution (FCR) rates.
- Executed secure user account provisioning and triaged critical Level 2/3 technical escalations to engineering teams with detailed troubleshooting documentation.

Service Desk Specialist · Concentrix

- Functioned as the primary IT support contact to resolve high volumes of hardware, software, and network outages, actively guiding end-users through remote desktop troubleshooting.
- Streamlined incident management workflows and request fulfillment using enterprise ticketing tools, significantly reducing average handle time and improving end-user satisfaction.

Sep 2021 – Aug 2022

Service Desk · TTEC

Oct 2019 – Aug 2021

- Delivered specialized service desk support in a highly regulated healthcare environment, translating complex technical jargon into actionable troubleshooting steps for non-technical staff.
- Safeguarded sensitive patient records and ensured 100% data accuracy and strict HIPAA compliance during all technical interventions and incident resolutions.

Grab Operator / Driver · Self-employed

Nov 2016 – Aug 2019

- Provided safe and reliable transportation services to passengers while adhering to traffic laws and regulations.
- Ensured a positive customer experience through a clean, comfortable vehicle and effective passenger communication.
- Managed payment transactions and tracked expenses to maintain profitability.

Telecom Engineer · Fahd Abdullah Alireza & Partners Engineering Consultants Co.

Mar 2014 – Mar 2016

- Consultant and designer providing expert guidance and design solutions for Voice, Data, IPTV, Fire Alarm, Public Address, CCTV, Access Control, Audio/Visual, and Clock systems for the SABIC housing and Royal Commission Jubail & Yanbu project.
- Prepared Bills of Quantities, responded to RC comments, reviewed designs, and produced Issued-for-Construction (IFC) drawings.
- Reviewed material specification submittals and responded to contractor technical queries (TQ).

- As a Revit specialist, provided architectural, structural, and MEP expertise; served as ArcGIS data controller for the project.

Project Engineer & ArcGIS Specialist · SK Engineering & Construction Co. Ltd Aug 2011 – Aug 2013

- Designed civil, cable, and fiber schematic diagrams for districts awarded by Mobily and STC; planned, scheduled, and directed work to meet complex engineering objectives.
- Initiated detailed work outlines, decided on approaches, and delegated to engineers for development of technical proposals; coordinated and resolved problems across the company, subsidiaries, and outside organizations.
- Acted as technical consultant and reviewed directed engineers' work and reports for quality and correct presentation.
- ArcGIS / ArcFM engineer — maintained and reviewed all data in the Mobily server database per design and as-built for SKEC projects; trained and developed SK GIS personnel on Mobily's ArcGIS system and extended it with Python attributes. ESRI certified.

Telecommunications Engineer · Middle Sea Telecom May 2009 – May 2011

- Attended site meetings and inspections, reported on progress, and monitored project schedules for Saudi Telecom and Mobily.
- Implemented and supervised civil works, primary and secondary copper jobs, fiber installation and repair, and all MSAN replacement jobs.
- Evaluated technical specifications of as-built plans, prepared technical solutions, and conducted field surveys and variation analyses.
- Managed materials and manpower, created project forecasts, redesigned as-built plans in AutoCAD and MicroStation, prepared binders, and produced Bills of Quantities.

Telecommunications Engineer · NESCO Group S.A. Feb 2006 – Jan 2009

- Implementation engineer designing primary and secondary Fiber and Copper networks and successfully redesigning as-built plans; imparted extensive copper and fiber-optic jointing knowledge to NESCO technicians.
- Implemented and supervised civil works, copper jobs, fiber installation and repair, and MSAN replacement for the Saudi Telecom project.
- Evaluated as-built specifications, prepared technical solutions, and conducted field surveys and variation analysis; produced Bills of Quantities and binders for all copper and fiber jobs.
- Supervised MSAN installation from civil works through cut-over and commissioning (Jeddah RAN to MSAN replacement); conducted DSL installation, troubleshooting, and testing. Earlier, as piping engineer, surveyed and planned pipe profiles and elevations and designed in AutoCAD and MicroStation.

EDUCATION & CERTIFICATIONS

B.S. Mechanical Engineering · Mapúa Institute of Technology 1997 – 2003

ESRI Certified ArcGIS Professional Certified
